## LABORATORY TEST REPORT

### MOLECULAR DIAGNOSTICS

#### Throat/Nasal Swab COVID-19 (SARS CoV-2)

#### Throat/Nasal Swab COVID-19 (SARS CoV-2) (Real Time PCR)

Negative

#### CT VALUE

--

#### Interpretation

RESULT	REMARKS
Positive	RNA specific to SARS-CoV-2 Detected
Negative	RNA specific to SARS-CoV-2 Not detected
Inconclusive	Inconclusive. This could be due to low viral load in the sample. A repeat sample is recommended for confirmation.

#### Note

\*ICMR Registration number for Covid-19 is SPPLPB.

#### Interpretation guidance:-

\*Testing of referred clinical specimens was considered on the basis of request / referral received from / through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP)/ any other health care facility affirming requirements of the case definition/s.

**\*A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection\*.**

\*A positive test result is only tentative, and will be reconfirmed by retesting.

**\*Repeat sampling and testing of lower respiratory specimen is strongly recommended in severe or progressive disease. The repeat specimens may be considered after a gap of 2-4 days after the collection of the first specimen for additional testing if required.\***

\*A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.

\*Please note that these results are not to be used for any thesis or presentations or for Publication in any Journal without the prior permission of the Director General, ICMR.

\*\*\* End of Report \*\*\*
