Billing Name M/S USHA DIAGNOSTICS

LABORATORY TEST REPORT

MOLECULAR DIAGNOSTICS

Throat/Nasal Swab COVID-19 (SARS CoV-2)

Throat/Nasal Swab COVID-19 (SARS CoV-2) (Real Time PCR)

Negative

**CT VALUE** 

Interpretation

p. otation				
RESULT	REMARKS			
Positive	RNA specific to SARS-CoV-2 Detected			
Negative	RNA specific to SARS-CoV-2 Not detected			
Inconclusive	Inconclusive. This could be due to low viral load in the sample. A repeat sample is recommended for			
	confirmation.			

## Note

## Interpretation guidance:-

Dr. V. Prakash MD (MICRO) (CONSULTANT MICROBIOLOGIST)

<sup>\*</sup>ICMR Registration number for Covid-19 is SPPLPB.

<sup>\*</sup>Testing of referred clinical specimens was considered on the basis of request / referral received from / through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP)/ any other health care facility affirming requirements of the case definition/s.

<sup>\*</sup>A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection\*.

<sup>\*</sup>A positive test result is only tentative, and will be reconfirmed by retesting.

<sup>\*</sup>Repeat sampling and testing of lower respiratory specimen is strongly recommended in severe or progressive disease. The repeat specimens may be considered after a gap of 2-4 days after the collection of the first specimen for additional testing if required.\*

<sup>\*</sup>A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.

<sup>\*</sup>Please note that these results are not to be used for any thesis or presentations or for Publication in any Journal without the prior permission of the Director General, ICMR.
